Point of Sale

POS (Point of Sale) System is a system integration software and hardware to process the transaction between the customer and seller.

Inventory and stock management

Track menu items and raw goods for each dish. Know what you have on-hand, when it will expire, and when you need to order more.

Billing and order processing

Quickly and accurately receive many orders with open tickets and Bill.

Customer & Employee management

Improve your employee management and increase their performance.

Sales monitoring and reporting

Sales reports are the cornerstone of every business and they provide an overview of all transactions over a period of time.

Loyalty programs and gift cards

Reward loyal customers and keep them coming back for more. Create special offers and incentives with a customer loyalty program to drive repeat business.
